

Agriculture & Organic Solutions

Treated

The Onion crop on the left was a first year application. Plant health, root growth and yields were larger

Un—Treated

The Onion crop on the right was not treated. Plant health, root growth and yields were smaller

Improves

Green Waste Digestion

Spring Soil Tilth

Spring Germination

Reduce

Water Consumption

Fertilizer Usage

Soil Compaction

Microbial Soil Conditioners & Supplements

- ◆ Works on agricultural crops & plants
- ◆ Improves water-holding capacity of the soil
- ◆ Increases cation exchange (CEC) reactions
- ◆ Buffers salts and toxins
- ◆ Breaks up clay/caliche soils
- ◆ Retains water-soluble inorganic fertilizers
- ◆ Increases aeration of soil and improves drainage
- ◆ Promotes micronutrient uptake
- ◆ Promotes soil pathogen suppression
- ◆ Reduces other fertilizer requirements
- ◆ Reduces other fertilizer requirements
