

# Agriculture Fall Applications

## Un-Treated

The onion crop on the left was a first year application. Plant health, root growth and yields were larger.

## Treated

The onion crop on the right was not treated. Plant health, root growth and yields were smaller.

## Improves

Green Waste Digestion

Spring Soil Tilt

Spring Germination

## Reduce

Water Consumption

Fertilizer Usage

Soil Compaction

## Microbial Soil Conditioners & Supplements

- ◆ Works on agricultural crops & plants
- ◆ Improves water-holding capacity of the soil
- ◆ Increases cation exchange (CEC) reactions
- ◆ Buffers salts and toxins
- ◆ Breaks up clay/caliche soils
- ◆ Retains water-soluble inorganic fertilizers
- ◆ Increases aeration of soil and improves drainage
- ◆ Promotes micronutrient uptake
- ◆ Promotes soil pathogen suppression
- ◆ Reduces other fertilizer requirements
