

Benefits of BioLynceus Environmental Solutions for Agriculture

- ◆ Saves time and money
- ◆ Saves water
- ◆ Increased soil fertility
- ◆ Increased biological activity in soil with simultaneous increase in release of nutrients already present but previously locked away in inorganic chemical compounds or crop residue
- ◆ Decreased compaction from equipment traffic or foot traffic
- ◆ Loosens heavy clay soils
- ◆ Higher germination percentages and the production of stronger seedlings
- ◆ Decreased disease pressure due to the production of biological antagonists to disease organisms and healthier plants
- ◆ Sequestering of salts in the soil
- ◆ Promotes healthier root zones
- ◆ Reduced weed pressure due to improved nutrient balance, reduction of aerobic decomposition, and improved oxygen-carbon dioxide levels in the soil
- ◆ Increased speed of breakdown of biodegradable chemicals in soil
- ◆ Better use of available moisture or less capital outlay for irrigation water
- ◆ Less capital outlay for crop protection chemicals
- ◆ A safer, less polluted environment
- ◆ Improves water penetration
- ◆ Improves water holding ability of soils
- ◆ Increases nutrient uptake
- ◆ Stronger, sturdier, hardier plants
