Dear Rick:

We started using your products on our golf course around mid-February and have already noticed several changes in our greens, tee's and fairways.

Before treatment we had a problem with soil compaction and several areas where grass wouldn't grow or mature because of sodium content in the soil.

In just one month the soil has become less compacted and in areas where the bermuda grass wouldn't grow or turn green we now have green healthy looking grasses. We can definitely see a difference in our soil and our grasses between the areas we have already treated and those we have not treated.
