Re: Humega

Rick:

This letter is to inform you of the positive results that Humega has on the turf farm. We would recommend this product to be used on other turf farms, parks, golf courses, and recreation fields. The following are results that we had when using Humega:

- Noticed increase soil flocculations and water retention.
- Control of some turf grass diseases and increase of thatch decomposition.
- Able to harvest turf grass when soil and air temperatures are low.
- Ease of application with most irrigation systems.
- Temperatures in the sod rolls are at least ten to fifteen degrees cooler.
- Sod rolls had better lateral strength (more and stronger tiller roots).
- Cost per application is affordable.
- Twenty percent less water usage.
- Humega is 100 percent organic.

Thank you for taking time out to help us set up a fertilizer program. If any one has any questions, please do not hesitate to call me.

Sincerely,

Randy Hiraki  
Operational Manager
