

TESTIMONIALS

GOLF COURSE

" I have been using "biologicals" for more than 3 years along with Humic Acid products for more than 4 years. The results for me have been very positive. Some of the positives are increased turf quality and vigor, better utilization of fertilizer (it seems to last longer), quicker germination and quicker maturation of seedlings and fewer hot spots. But the most obvious of the results have been the fact that I have not applied a fungicide to my greens in over 4 years. I don't even keep fungicides on property anymore. It seems that the biologicals are out competing the pathogens and are keeping them in check. Disease is no longer a concern for me at this course. Besides having better turf, the lack of disease is reason enough to keep using them. I will be using them for a long time to come. It's in the program.
