

Our biological products are 100% natural and earth friendly. When introduced into the natural environment it stimulates indigenous bacteria enhancing the biological process and accomplishing in days and months what would normally take nature years.

Our product is a live culture which contains a composite of micro-organisms (aerobic, facultative, and anaerobic), enzymes, amino acids, algae, and polysaccharides that are non-pathenogenic and non-toxic.

Different uses require different product formulas and specific application methods. Let us help you to lower the costs of your existing operations, and increase your profitability while alleviating waste.

Benefits of Biologicals for Waste Treatment

- Faster waste digestion
- Reduces clean out frequency
- Easy to use
- No need for special equipment
- Waste treatment system operates better and becomes biologically healthy
- Eliminates most odors
- Reduces ammonia levels
- Reduces nitrate and phosphate levels
- Reduces biochemical oxygen demand
- Reduces volatile suspended solids
- Reduces total suspended solids
- Environmentally safe
- Effective on municipal / institutional waste treatment
- Effective on animal waste and lagoons
- Accelerates composting of solids
- Positive effects on effluent discharge
- Microbial action is increased

Increase Waste Treatment Efficiencies

BioLynceus' biological solutions work with reducing sludge, opening water flow, improving Ph balance of out-flow and remediated fluids throughout the waste treatment system.

Whether you are treating a lagoon, animal waste or municipal waste, our products will increase facility efficiencies by placing the right balance of biologicals in your system.

BioLynceus' actively work with waste from animal in the following types remediation systems:

Lagoons for Animal Waste

- Pork
- Chicken
- Dairy
- Agricultural Remediation

BioLynceus' formulas integrate easily into your existing waste treatment system. Most applications are premixed and injected.

Periodic review of the waste treatment system keeps you apprised of the environmental changes to keep your system balanced and efficient.

*Architectural design and lagoon consulting is available by request.
