To Whom It May Concern:

I have worked as the Superintendent of Utilities for the town of Center for 32 years. The past four years I have used Bio Scrubber II in the Center waste treatment system.

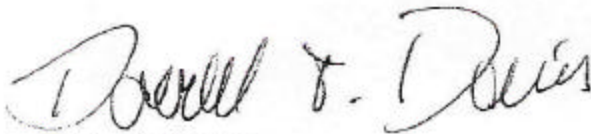

I am now retired and own Mountain Man Consulting in South Fork Colorado. If you have questions regarding Bio Scrubber II please call me at 719-873-1617.

The Bio Scrubber worked well cleaning the sewer lines and it cleaned the lift stations as well as any commercially available cleaner that I have experienced. It is also environmentally safe and non toxic. I was using one gallon added to a different manhole on the outer edge of our system each day. This allowed the Bio Scrubber to travel the full length before it arrived at the ponds. It is a program that has to be continued. I could see the effects at the last clean out next to the ponds. Headcheese broke loose in the lines and I cleaned it out.

We did not have the money to us the product long enough to calibrate rates for the most efficient use and therefore we were not able to reap the full benefits. Bio Scrubber II used on a consistent schedule will probably save dredging the ponds.

I applied a gallon a day in the sludge digester and it worked well. The Bio Scrubber removed the sludge out of the Digester and kept the sludge down so that it would settle quicker. It reduced the level from 8 ft to 5 ft. in 55 to 60 days.

Sincerely,

Darrell T. Davis
